

Blogging platform

Create a blogging platform where users can register, write, and publish their own blog posts. There will be two major components: 1. Blog site that will show blogs from all authors. 2. Users can comment to articles after providing their phone number 3. Backend site, where the authors can create an account and create blogs after logging in.

Tech Stack

1. Database: MySQL
2. Backend: NodeJS + ExpressJs
3. Frontend: Angular/React

Development & Delivery

1. Create a git repository for the project.
2. For testing use your local machine but for staging use an AWS EC2 instance where I can see the app live and test it.
3. Create 2 docker images:
 1. Dev image
 2. Deploy image
